ABSTRACT

A thermoplastic molding composition for making a molded article comprising (i) a component selected from the group consisting of polyethylene terephthalate, a diester of polyethylene terephthalate, and a combination of polyethylene terephthalate, a diester of polyethylene terephthalate, and (ii) a polymer additive comprising a hydroxy compound comprising from 3 to about 8 hydroxy groups, wherein the hydroxy compound is sufficient to decrease the level of acetaldehyde in the molded article that would be present without including the hydroxy compound in the thermoplastic molding composition. A method of making a molded article with decreased levels of acetaldehyde comprising, first, providing a thermoplastic molding composition according to the present invention, and, second, molding the thermoplastic molding composition to form a molded article.
